Invitation

Future Fuels for Future Shipping – Meeting Tomorrow's Bunker Demands at the Weser Ports

On February 11th, from 4:00 PM to 5:00 PM online via Teams.

The ports of Bremen and Bremerhaven are making progress towards decarbonization with a GHG-neutral port management company since 2013 and a GHG-neutral port infrastructure since 2023.

Bremenports, supported by all relevant authorities, is currently exploring ways to support their customers in their efforts to decarbonize shipping by the following means:

- Enabling regional bunker suppliers considering expansion of their supply structures.
- Assisting Companies seeking to build up production capacities.
- The relevant regulatory authorities are working on regulations to facilitate practical applications, such as bunkering.

Against this background, an [online survey](#) was prepared to find out which fuels would be requested by future vessels calling the ports of Bremen and Bremerhaven or other Weser ports. The survey is still open until 30 April 2026. By evaluating the survey results, the aim is to facilitate the development of the supply structures you need, so that your support is highly appreciated.

Are you interested in first results of the survey? Do you plan to participate in the survey, but some questions are still open? Would you like to learn more about how the future bunker infrastructure will be implemented in Bremen/Bremerhaven? Do you like to get in touch with the responsible persons?

Then this short webinar is right for you.

Please look forward to a keynote statement of Thomas Rust, Ramboll, regarding the 2024 bunker study and the developments since its completion.

Please register [HERE](#) by February 9th, 2026.

We look forward to your participation!

Programm

16:00 | Begin

16:00 | Welcome by MCN, bremenports and SWHT

16:10 | Supply potential for low-carbon and renewable fuels for the shipping sector in Germany? Keynote-Statement

Thomas Rust, Ramboll

16:25 | What is to be expected in Bremen and Bremerhaven as bunker infrastructure – some insight by

Nadja Köppen, *captain*, Senat für Wirtschaft, Häfen und Transfer

Ralf Lüken, *group coordinator*, D&S Energies Holding GmbH

Georg Ulbrich, *naval architect*, bremenports GmbH & Co. KG

16:45 | Open Discussion

17:00 | End

After 17:00 | Opportunity for individual questions in a smaller circle (*open end*)
